(54) LIGHT ENERGY-ELECTRIC ENERGY CONVERSION SYSTEM WITH ANTENNA COMPOUND AND CHARGE SEPARATION TYPE COMPOUND ACCUMULATED ON ELECTRODE AS MIXED SELF-ORGANIZED MONOMOLECULAR FILM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an artificial photosynthetic aggregate of potential utility.

SOLUTION: This light energy-electric energy conversion system is characterized in that a self-organized monomolecular film is formed on a surface of a metallic or semiconductor film formed on a surface of a substrate by mixing an energy-donor compound having a boron-dipyrin portion by covalent bonding or coordinate bonding, such as the compound of the formula 1, and an energy- acceptor compound having a ternary system, such as the compound of the formula 2, so that energy can move between the two compound.

LEGAL STATUS

[Date of request for examination]

06.01.2005

[Date of sending the examiner's decision of

rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
